Looks like it affected much of Nevada and Utah

Jean-Paul,

I've attached a quick analysis for 00Z on 06/05 (evening of June 4, 2015) which shows evidence of SI over Great Basin NP and low level pollution (ox production and enhanced CO) to the south.

Brad

All,

Is there any evidence of a stratospheric ozone intrusion that might have occurred last week (June 3 and 4)? We had high O3 concentrations throughout the network, with an exceedance of MDA8 on Thursday.

I looked at the RAQMS output for those days, and it predicted O3 impacts.

Thanks,

Jean-Paul Huys
